

Forever Black™ Bumper and Trim Reconditioner Application

BDesigns recommends that you place rags or newspaper under the work area, as well as wear vinyl gloves. This will prevent the Forever Black™ dye from staining work surfaces and your hands.

Forever Black™ is designed to permanently recolor and protect all black plastic, vinyl and rubber surfaces on your vehicle. It is also environmentally safe, non-flammable, and contains no silicone.

Instructions

- **Never use any corrosive cleaners, thinners, paint cleaners or any solvents at all. These may break down the material.**
- **For best results, first clean the parts with a diluted solution of a product such as Fantastik. Thoroughly rinse the parts.**
- **Wash the parts you will be treating, with warm water and soap as you would normally wash the vehicle. Thoroughly rinse the parts.**
- **Allow the parts to completely air dry.**
- **If the parts you are treating are directly adjacent to painted, or other surfaces that you do not want stained, please mask off the areas for protection or remove the parts first.**
- **Move the parts to be treated onto the rags or newspaper to protect the work surfaces (if applicable or if the parts are removed).**
- **For small to mid sized parts, use the sponge applicator that comes with the bottle, to evenly distribute the reconditioner as required. Allow Forever Black to completely dry.**
- **For larger surfaces, apply Forever Black with a soft cotton cloth such as an old cotton t-shirt. Apply in a circular motion which keeps streaking to a minimum. Allow Forever Black to completely dry.**
- **If the parts are severely faded, more than one application of Forever Black may be required. Allow Forever Black to completely dry before applying additional coats.**
- **For surfaces that had a higher gloss, applying Forever Black in multiple coats will increase the gloss.**
- **If you are applying Forever Black to very faded or browned rubber parts, wait for two days after Forever Black has been applied and then apply a quality Rubber Restorer product (without silicone) to help maintain a soft and supple surface.**
