

Plastic Component Restoration Aftercare

BDesigns plastic restoration is guaranteed for 6 months only against restoration workmanship. Regular use, abuse or accidents are not covered. Some hidden material defects in the original components may have been encountered during restoration. Any such defects have been repaired, but it is possible that age may affect such internal material defects and subsequently the repair. These possible defects are not guaranteed. All restored plastics are just as susceptible to damage (scratching) as the original components. Take care when re-installing components.

General Plastic Component Aftercare

- **Do not use any ammonia-based products near the restored plastic (such as cleaning a mirror) for one week after receiving the components. If you need to wash the components, use mild detergent and warm water. Rinse with clean water to remove soap residue. Pat dry and let air dry complete.**
- **To remove bugs, etc., gently wash with mild detergent and warm water using a very soft bristle brush such as an old toothbrush. Brushes that are too stiff will mark the plastic. Rinse with clean water to remove soap residue. Pat dry and let air dry complete.**
- **Never use any corrosive cleaners, thinners, paint cleaners or any solvents at all. These can break down the protective coating and can destroy the plastic.**
- **Do not use any silicone-based products such as Armour-All on the restored components. These products quickly dry out and can build up residue over time.**
- **The only product we recommend using is Forever Black. It is a plastic and vinyl dye that impregnates the surface of the plastic. It does not dry out and lasts a long time.**
